The influence of the lifespan approach has been an important feature of recent research in developmental psychology, as has a growing interest in the relationship between personality and development. This important new book, edited by two distinguished psychologists, explores the relationship between personality and development from a life-course perspective. The book presents current theoretical approaches and new empirical findings from ongoing studies conducted by leading researchers in North America and Europe. It is unique in focussing on successful personality development, where developmental psychology in the past seems to have focussed almost entirely on problem behaviour and risk of maladaptation. The book has a multidisciplinary appeal and will be of interest to students and researchers in the fields of developmental psychology, adult development and aging, and personality and social psychology.

? Takes a lifespan approach to development ? Looks at the relationship between personality and development ? Focuses on successful development
