## 内容简介

???The present book is a collection of originally independent articles which were written at different times and for quite different occasions. Hence, the reader will find some of the fundamental ideas recurring throughout the book. The selection has been made in order to give a picture of the fields thus far studied, the psychology of the person and of the environment, and at the same time to indicate their connections with the various applied fields, especially child psychology, pedagogy, psychopathology, characterology, and social psychology.

???Only a few years ago one could observe, at least among German psychologists, a quite pessimistic mood. After the initial successes of experimental psychology in its early stages, it seemed to become clearer and clearer that it would remain impossible for experimental method to press on beyond the psychology of perception and memory to such vital problems as those with which psychoanalysis was concerned. Weighty "philosophical" and "methodological" considerations seemed to make such an undertaking a priori impossible.
