内容简介

Natural history writer Sleeper and nature photographer Wolfe teamed up to provide photodocumentation of cat species in *Wild Cats of the World* (Crown, 1995). In their newest collaboration, they continue their examination of large mammals with large, full-colored glossy photographs of close to 100 primate species. These magnificent plates bring the animals up close, providing rich detail, and exhibit species rarely photographed such as the golden-handed tamarin and the aye-aye. The authors break down the primate species by geographical location but fail to address taxonomic relationships. Succinct text of 75-100 words touches on the basic behavior, food sources, and physical characteristics of each animal, but the glorious photographs makes this book a winner. For popular natural history collections. Raymond Hamel, Wisconsin Regional Primate Research Ctr. Lib., Madison
