内容简介

standing work almost from the moment of publication. Beginning with a groundbreaking interpretation of the origin and nature of the city Lewis Mumford follows the city's development from Egypt and Mesopotamia through Greece Rome and the Middle Ages to the modern world. Instead of accepting the destiny of the city as the tendencies to metropolitan congestion suburban sprawl and social disintegration, Mumford outlines an order integrating technical facilities with biological needs and social norms. As compelling as it is comprehensive Mumford's award-winning work "is far more than the study of urban culture through the ages. It is a revitalization of civilizations(Kirkus Reviews).

目录
